

# **Controlling Annual Ryegrass in Southern Illinois**

### **Michael Plumer**

## **University of Illinois Extension**

### **Herbicide Effectiveness**

Ryegrass cover crop varieties must be controlled by herbicides in the spring in order to plant a row crop. The following tables, summarizing three years of trials, shows the herbicides tested and their effect on the different varieties. The 2006 trial was sprayed March 16 in vegetative stage of growth. Spraying and evaluations were done in cooperation with Ron Hines, Dixon Springs Ag Center. The 2007 trial was sprayed April 16, a week after a freeze, when plants were at the vegetative to first joint stage. The 2008 trial was sprayed April 23, when plants were at first joint.

**Note**: In the following tables, the rating indicates the percent of control, with **100** meaning no plants survived the treatment.
